Dr. Mahrous Suleiman Family Educational Consultant and Trainer

The lecturer talked about how to deal with the exam paper, starting from preparation and study, through the mechanism of dealing with the question paper and the questions from the clever and the distracted, and ending with the tiring procedures for answering the questions. He also mentioned many methods and machines that work on improving the ability to memorize by developing learning methods (auditory / taste / visual / sensory).

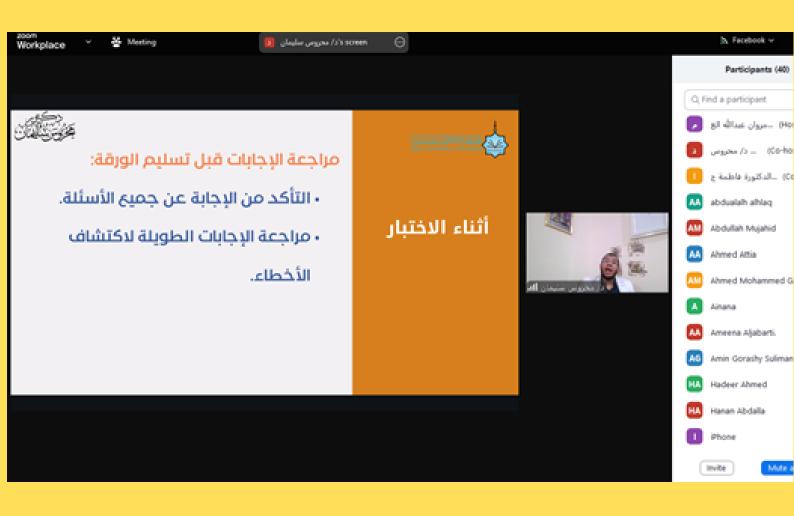

TOPICS

The trainer explained the mechanism of the mind, the method of storing information, acquiring skills, and ways to deal with them.

The trainer explained the stages of the mind's work in learning, which are (perception, processing, repetition and reinforcement, storage, recall and recollection).

The trainer explained the types of memory (sensory, short-term, long-term) according to the Atkinson model.

The trainer explained the benefits of mind maps for developing and consolidating memorization.

The trainer explained the reasons for forgetting and losing information and ways to process it.

The number of attendees was 42 people from inside and outside the university
